

KUOKFUI CHONG

DIPLOMA IN SOFTWARE ENGINEERING STUDENT

Address: Taman moyan jaya 2, kuching Sarawak
Malaysia

Address singapore: Jurong east blk 130

Email: bashenkuok6801@gmail.com

Portfolio: https://ahchong14.github.io/Chong_CV/#/

SUMMARY

Software Engineering student with hands-on experience in building full-stack applications, including real-time systems and business-oriented platforms. Strong interest in AI automation, backend systems, and scalable architecture. Actively seeking internship opportunities to apply technical skills in real-world environments.

Available for internship from Aug 2026 – Feb 2027, with a short academic break after the first 3 months to complete a required university report, and able to resume the internship thereafter.

EDUCATION

Fame International College
Diploma in Software Engineering

CGPA: 3.68

(Future)
Swinburne University

Bachelor of Computer Science, Expected start in March 2027

Focus major Cybersecurity / AI / IoT

SKILLS

- C++, Python, Dart, JavaScript, MERN Stack (Mysql, express.js, React, Node.js)
- Flutter, Git (version control), REST APIs
- OOP concepts, Data Structures
- UI/UX basics, System design fundamentals
-

Additional Skills

Basic experience with AI tools (Ollama, n8n automation workflows)

Basic understanding with Ai integration into application or system

EXPERIENCE

PROJECTS

Food Delivery App (Clone) (Full-Stack Project)

- Built a Food Delivery system using Flutter and backend APIs, simulating real-world order, driver, and user workflows
- Implemented real-time tracking and routing features, enhancing delivery visibility and user experience
- Designed system structure with role-based functionality (user, driver, vendor) and integrated REST APIs for communication

Final Year Project – Industry-Based System Development (Ongoing)

- Collaborating with a real-world company to analyse business workflows and develop a customised software solution to improve operational efficiency
- Conducting system analysis, requirement gathering, and design (Use Case, ERD) following structured SDLC practices
- Developing system modules, database integration, and user interface, followed by unit, integration, and system testing
- Delivering a complete system with technical documentation and final presentation to client and supervisor

Student Portal System (C++ OOP Project)

- Developed a console-based Student Portal applying core OOP principles including encapsulation, inheritance, and polymorphism
- Implemented features such as course registration, user management, and grading system
- Utilised data structures and modular design to ensure scalability and maintainability

Billiard POS System (Business Application)

- Designed a Point-of-Sale system for billiard operations, focusing on transaction handling and business logic
- Implemented features for order management and operational tracking to improve workflow efficiency
- Structured system for usability and real-world small business application
